

Innovation...

...in the Patient transfer field

New Hangers SLS* with secure locking

*Safe Locking System

The hook is in the open position.

The buckle of the sling is introduced.

A tension on the sling locks the hook.

Patient safety is defined as the reduction of any risk of harm that can be avoided. For the comfort and safety of the patients, **SCALEO Medical** equips henceforth all the transfer systems with a 4-point suspension or with an automatic electric suspension, as well as with the new SLS hooks with secure locking.

Our continuous presence alongside our customers and patients provides us with a better understanding of their expectations towards the improvements of our products.

This enables us to conceive and imagine new products and develop the innovation skills that will characterize our activities in the long term.

Since the beginning, the innovation has been the result of the relationships with our customers and our innate entrepreneurial spirit.

Many partnerships held with doctors, training centers and universities reinforce this synergy.

Ideas, experience, intuition, technology, audacity and entrepreneurship are inherent qualities of our culture of innovation.

Meeting the needs of our customers and providing solutions enables us to seize each opportunity to grow, to innovate and to progress.

We will continue to create new concepts and to develop new technologies in order to expand the traditional boundaries of our fields of activities.

These fields are the Hygiene and Patient transfer, Medical weighting, Oxygen therapy and the Respiratory Wellness.

This strategy enables our Group to constantly renew itself within these fields and to anticipate future challenges of the market.

Consequently, the **SCALEO Medical** Group pursues a long-term growth strategy based on the following fundamental pillars:

- The development of the best products and services of the market
- Ensure an ongoing improvement of the products
- Create new concepts, invent and innovate

We are convinced that this strategy is the key to face the challenges of the market, improve our performance and participate in the creation of new techniques in the health care field.
